ALL SHEEP PERFORMANCE TESTED

ALL STUD RAMS HAVE BEEN GENOMIC TESTED

PLEASE NOTE \$2,000 MINIMUM PRICE FOR STUD RAM TRANSFER

LAMBPLAN EXPLANATION

ASBVs (and Indexes) are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits.

ASBV EXPLANATION

- *Birth Weight* ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.
- *Weight* ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.
- *Fat Depth* ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.
- *Eye Muscle Depth* ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker-muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

INDEX EXPLANATION

\$ Value Indexes: A dollar index indicates the value of an animal based on its suitability for a particular market. The value is given in real dollar figures and expressed as \$/ewe joined/yr. For example a dollar index of 105 indicates that a ram will produce \$5 extra value for every ewe joined compared to a ram with an \$ index of 100.

DAYS WHITEFACE MATERNAL COMPOSITES

We have endeavoured to combine the most relevant genetics to produce rams suitable to maintaining and progressing a self replacing flock. We have sourced these genetics from:

- 1) the existing Maternal Composite database
- 2) the Merino database
- 3) our White Suffolk flock

If anyone would like further explanation of the following or wishes to discuss our breeding programme please call Lachy on 0428 521 630.

Breed Abbreviations:

WS	White Suffolk	TEX	Texel
EF	East Friesian	Finn	Finn
BL	Border Leicester	PM	Poll Merino
CP	Coopworth	PD	Poll Dorset
CM	Composite Maternal		

ASBV abbreviations

BWT	Birth Weight
MWWT	Milking ability of a rams daughters
PWWT	Post weaning weight (Approx 225 days of age)
AWT	Adult Weight
PEMD	Post weaning eye muscle depth
PFAT	Post weaning fat depth
PFEC	Post weaning faecal egg count
YGFW	Yearling greasy fleece weight
YFD	Yearling fibre diameter
NLW	Number of lambs weaned
MCP+	Maternal Carcase Production+ Index – This index targets self replacing production systems where maintaining adult weight and fleece weights are seen as important, at the same time as improving carcase traits. It also aims to reduce worm egg count.

IMPORTANT MESSAGE FOR SHEEP FARMERS

Campylobacter is reducing
lamb marking percentages
across Australia^{1,2}

Contact Sam Scarlett on 0438 287 735 to
discuss strategies against campylobacter
