Industry Leading Whiteface Genetics

Midday Start

Our 2026 sale team is once again full of performance. The bulls have a lot of visual carcase which is backed up by their breedplan data. The Sires of these bulls are breed leading both in terms of phenotype and their data. Lead sire is Tobruk Southern Cross S015 who was purchased as a yearling for record price of \$91,000. In a tough selling environment last year his first fifteen sons sold to \$28,000 and averaged \$11,133. His impressive and unique data includes being a trait leader for birthweight, 200, 400 and 600 day wt. and IMF. We have 20 sons of Southern Cross on offer.

This year he is joined by homebred Herefords Australia Super Sire Landlord T064. Landlords first sons have his impressive length and Sire appeal. Landlord is a trait leader for gestation length, 200, 400 and 600 day wt. and scrotal size.

We have a couple of standout sons by high marbling Sire Wirruna Steakout S457 that were used as yearlings. Steakout is top 1% for IMF and both selection indexes.

Like 2025 there will also be a selection by outcross US Sire SHF Houston. He is a trait leader for 200,400 and 600 day wt. as well as being top 1% for EMA and both indexes.

We will have a small selection on display at Casterton Saleyards on Wednesday the 4th February. Our On-Property field day is Monday 9th February 2026. Our Bull Sale is Monday 23rd February 2026 at 12pm.

Please contact Lachy on 0428 521 630 with any questions.

Outstanding Birthweight to Growth Data Spread

We normally concentrate on how good our carcase data is in relation to the breed average (which it still is) but we thought this year we would highlight our high calving ease/low birthweight in relation to our very good growth data. To be able to have a bull sale average for 400 day wt in the top 10% while also having calving ease and birthweight averaging in the best 35% of the breed means progeny of our bulls will be born easily but still have the ability to grow rapidly.

Bull fertility is very important, and our sale bulls are semen and morphology tested prior to sale. Selecting for fertility sees our scrotal EBV average in the top 15% of the breed.

As mentioned earlier our carcase data continues to be breed leading with both EMA and IMF sale averages being in the top 15% of the breed.

Unsurprisingly as a result of our concerted efforts over a range of traits our 2026 sale bulls average in the top 10% of the breed on the MSA index.
