OVINE JOHNES ACCREDITED MN2V S49 & MN2V S402

ALL SHEEP PERFORMANCE TESTED

ALL STUD RAMS HAVE BEEN GENOMIC TESTED

PLEASE NOTE \$3,000 MINIMUM PRICE FOR STUD RAM TRANSFER

LAMBPLAN EXPLANATION

ASBVs (and Indexes) are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits.

ASBV EXPLANATION

- *Birth Weight* ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.
- *Weight* ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.
- *Fat Depth* ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.
- *Eye Muscle Depth* ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker-muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

INDEX EXPLANATION

\$ Value Indexes: A dollar index indicates the value of an animal based on its suitability for a particular market. The value is given in real dollar figures and expressed as \$/ewe joined/yr. For example a dollar index of 105 indicates that a ram will produce \$5 extra value for every ewe joined compared to a ram with an \$ index of 100.

DAYS WHITEFACE WHITE BALDIES

Welcome to our third White Baldie offering.

We decided to create our own shedding maternal composite sheep in response to industry conversations.

This year's sale team sees an increase in shedding from previous years while maintaining our body type and increasing our performance profile. We look forward to 2027 when we will be able to present shedding ASBV's along with our growth, carcass and welfare trait ASBV's.

We look forward to your feedback. Always keen to have a chat about how these genetics may play a part in your flock. Please call Lachy on 0428521630 if you have any questions.

BWT - Birth Weight

MWWT - Maternal Weaning Weight

WWT - Weaning Weight

PWT - Post Weaning Weight

AWT - Adult Weight

PEMD - Post Weaning Eye Muscle Depth

PFAT - Post Weaning Fat Depth

PWEC - Post Weaning Worm Egg Count

WR - Weaning Rate

MCP - Maternal Carcass Production Index. Targets a self replacing maternal operation. It favours high early growth animals with good carcass and reproductive performance.
